Ministry of Higher Education and Scientific Research Scientific Supervision and Scientific Evaluation Apparatus Directorate of Quality Assurance and Academic Accreditation Accreditation Department

Academic Program and Course Description Guide

Introduction:

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

Concepts and terminology:

Academic Program Description: The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

<u>Course Description:</u> Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

<u>Program Vision:</u> The Department of Anesthesia Technology seeks to apply international standards in education, scientific research and community service for sustainable development in accordance with Islamic concepts

<u>Program Mission:</u> Anesthesia Department Techniques is aims to have a distinguished scientific standing by graduating qualified cadres to keep pace with developments in the field of anesthesia and intensive care techniques to enhance .professional concepts and ethics among students

Program Objectives:

The department aims to graduate qualified technical personnel to carry out their work in the public and private health sectors and aims to obtain program accreditation and enter international and international classifications

<u>Curriculum Structure:</u> All courses / subjects included in the academic program according to the approved learning system (quarterly, annual) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

Learning Outcomes: A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

Teaching and learning strategies: They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extracurricular activities to achieve the learning outcomes of the program.

Academic Program Description From

University name: Al Kafeel University

College / Institute: College of Health and medical Technologies

Scientific Department: Department of Anesthesia Techniques

Name of the academic or professional program: Bachelor's Degree

Name of final degree: Bachelor of Anesthesia Technology

Academic system: courses

Description Preparation date: 25/8/2025

File filling date: 1/9/2025

Signature:

Head of Department Name:

Asst.prof. Dr.Israa Abdul-Ameer

Date:1/9/2025

Signature:

Scientific Associate Name:

Asst.prof. Dr.Sddiq Ghani Joda

Date:1/9/2025

The file is checked by: Ali Najeh Abbas

Approval of the Dean

1. Program Vision

The Department of Anesthesia Technology seeks to be one of the best academic departments recognized for its integrity, meeting international standards in education, application of knowledge and scientific research, serving the community for the comprehensive and sustainable development of humanity, and dedication and embodiment of the spirit of Islamic values.

2. Program Mission

The Department of Anesthesia Technologies is keen to enhance the various cognitive aspects of community development by creating a distinguished scientific environment capable of producing a new generation with knowledge in various fields, which helps in building our society and providing an atmosphere of scientific excellence capable of enhancing scientific and cognitive creativity for generations. The department also seeks to offer a variety of scientific courses in various fields characterized by a culture of creativity in the work environment and the development of professional and cognitive capabilities. Instilling moral values, to enable students to acquire basic knowledge and skills in the field of anesthesia and critical care technology, enhance self–confidence, develop the spirit of cooperation, and recognize the importance of teamwork in the medical team.

3. Program Objectives

- 1. 1- To graduate qualified technical personnel to carry out their work
 efficiently and carefully according to professional foundations, with a focus
 on the ethics and honor of the profession and patient privacy.
- 2. 2- Qualifying a graduate of the Anesthesia Techniques Department to work in hospitals and health centers, able to work in a proper manner
- 3. Distinguished, with a high quality of education and efficient skills in the fields of anesthesia, in a way that is compatible with the labor market
- 4. 3- He must have experience in prescribing, determining and giving the appropriate dose of anesthesia to the patient according to many factors (age, nature of the medical procedure, health history...)
- 5. 4- Employing cadres trained to follow up on the patient's condition during the operation and ensuring that he does not wake up. He has high efficiency in monitoring ventilators in operating rooms, following up and monitoring the patient's health status during anesthesia with high efficiency, and communicating with patients to explain the nature and type of anesthesia.

4. Program Accreditation Minestary

Does the program have program accreditation? And from which agency? No

5. Other external influences Chief of collage

Is there a sponsor for the program?

Ministry of Higher Education - Private Education Department

Higher Education Authority- Attabah Abbasia

Professional Development

Mentoring new faculty members= write lactuer and visin lacter .

Briefly describes the process used to mentor new, visiting, full-time, and part-time faculty at the institution and department level.

Professional Development

Mentoring new faculty members

Subjecting new teachers to courses on teaching methods and taking a teaching competency test, and only by passing it are they allowed to teach, while following up on their teaching methods and giving them feedback.

Professional development of faculty members

Briefly describe the academic and professional development plan and arrangements for faculty such as teaching and learning strategies, assessment of learning outcomes, professional development, etc.

Follow up on teaching methods for all teachers by the Office of the Associate Dean, prepare seminars and workshops to develop teaching and speaking skills, and ensure the preparation and presentation of lectures in the continuing medical education curriculum.

12. **Acceptance Criterion** = rat of average marke

(Setting regulations related to enrollment in the college or institute, whether central admission or others)

The academic average for the student's graduation from preparatory school, physical and mental health according to the standards established and approved by the Ministry of Higher Education and Scientific Research

13. The most important sources of information about the program

State briefly the sources of information about the program. =book and journal

- 1. Approved and authenticated documents for the general curriculum of the college and the courses, vision, mission, and goals of the university and college in both Arabic and English.
- 2. The website of the Ministry of Higher Education and Scientific Research.
- 3. The official website of Al-Kafeel University and its College of Health and Medical Technologies, Department of Anesthesia Technologies
- 4. Billboards installed in the college corridors.

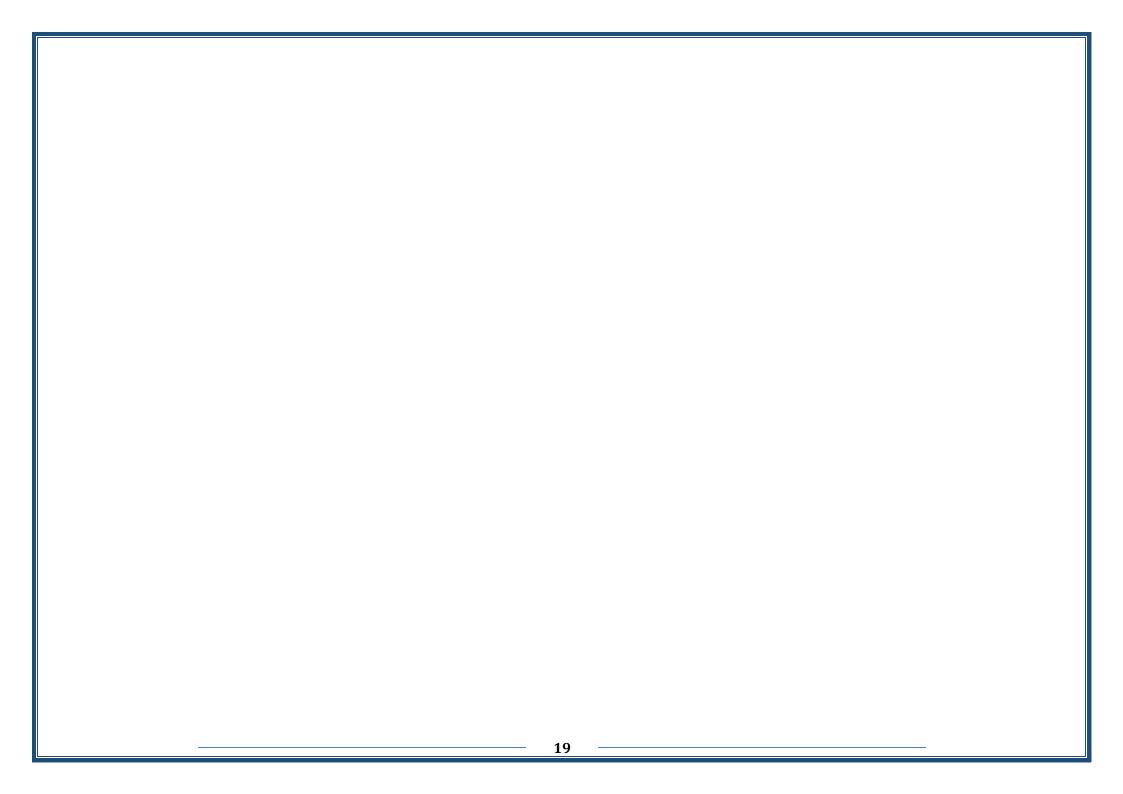

14. Program Development Plan

By practice and theory lecture

- 1)Systematic and recurring self-evaluation studies of the program are based on evaluating the learning and teaching outcomes of students and obtaining feedback from students about the components of the program.
- 2) Holding regular meetings with faculty members in local and foreign health and medical technology colleges to learn about new curricula and teaching methods.
- 3) Holding workshops on developing curricula and teaching methods in the college or attending those held in neighboring universities.

8. Course Objectives

Course Objectives

The general goal: At the end of the academic year the student will be able to understand the function of the various body systems

Management of emergency and medical cases a their relationship to anesthesia.

Specific objectives: The student will be able to:

-1 The student learns about the importance and function of some of the body's vital systems, such as the respiratory and cardiovascular systems And its relationship with the work of anesthesia

-2 To be able to identify some disorders and pathological conditions in these vital systems and their effect on them

The nature of anesthesia.

-3 To be able to use equipment and tools in the
laboratory.

-4 To be able to perform various clinical examinations of the body.

9. Teaching and Learning Strategies

Strategy

- 1- Adopting the method of delivering lectures and linking each topi with examples from a real work situation.
- 2- Giving them some simple practical exercises that are discussed be the students and solved during the lecture, with the participation of all students in the section with the professor, to give the subject a kind of interaction.
- 3- Presenting some practical cases.

Number of Credit Hours (Total) / Number of Units (Total) 30 Hours/4 units 7. Course administrator's name (mention all, if more than one name) Name: Mohamed sarem hamza Email: 8. Course Objectives **Course Objectives** Objectives of the academic subject: General objective: At the end of the academic year, the student will be able to... Understanding the functions of different body systems and dealing with situations Emergency and pathological cases and their relationship to anesthesia Special goals: 1- The student learns about the importance and function of some vital body systems, such as the respiratory system And the heart and blood vessels and their relationship with anesthesia

2- To be able to identify some disorders and pathological conditions in these vital organs and their effects

On the nature of anesthesia

- 3- To be able to use devices and tools in the laboratory
- 4– To be able to perform various clinical examinations of the body.

9. Teaching and Learning Strategies

Strategy

- 1- Adopting the method of delivering lectures and linking each topi with examples from a real work situation.
- 2- Giving them some simple practical exercises that are discussed be the students and solved during the lecture, with the participation of all students in the section with the professor, to give the subject a kind of interaction.
- 3- Presenting some practical cases.

8. Course Objectives

Course Objectives

Teaching the subject aims to introduce the studer to the basics of using devices, maintaining them, and modern technologies

Used in:

Special goals:

At the end of the year, the student should be ab to: –

- -1- Identify the sources of pollution in operating theaters and methods of treating them.
- 2- He is able to deal with methods of sterilizing and maintaining some devices used in anesthesia
- He is able to know the basis of work, problems and methods of using equipment and methods in anesthesia

The operating rooms include fluid administration devices, anesthesia gas fumigation devices, and measuring devices

Gas pressure and flow measurement

9. Teaching and Learning Strategies

Strategy

- 1- Adopting the method of delivering lectures and linking each topi with examples from a real work situation.
- 2- Giving them some simple practical exercises that are discussed be the students and solved during the lecture, with the participation of all students in the section with the professor, to give the subject a kind of interaction.

Course Objectives

Introducing the student to the various organs the body, the impact of injuries and diseases them from an anatomical and physiological perspective, and the consequences (complications) resulting from them. Also teaching the student the symptoms and signs these conditions and the basic frameworks for how to deal with them. Introducing the stude to cases that require surgical intervention and explaining the nature of this intervention (what they may encounter while working in operation and intensive care), with a focus on emergence cases. At this stage, the digestive, urinary,

respiratory and vascular systems (heart) are	
studieds.

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports etc

Required textbooks (curricular books, if any)	Fundamental of anaesthesia,1
	fourth edition, Ted Lin, Tim Smith, and
	Colin Pinnock
Main references (sources)	
Recommended books and references	
(scientific journals, reports)	
Electronic References, Websites	Internet network

1. Course Name: Anesthesia(2) 2. Course Code: 3. Semester / Year: Second Semester/three year 4. Description Preparation Date: 2025 5. Available Attendance Forms: Classes 6. Number of Credit Hours (Total) / Number of Units (Total) 30 Hours/4 units 7. Course administrator's name (mention all, if more than one name) Name: Hussain makki 8. Course Objectives **Course Objectives** Overall goal: Introducing the student to the anesthetic materials and devices used, preparing the patient before the operation, monitoring him during the operation, and taking care of him upon recovery. Special objective:-At the end of the year, the student will be at Identify the different types of anesthetics. Giving anesthetic doses in the required amounts. Patient care depends on the nature of the operation.

	Monitoring the patient during the operation a upon recovery.
9. Teaching and Learning Strategies	

Strategy

Adopting the method of delivering lectures and linking each topic with examples from a real work situation.

8. Course Objectives

Course Objectives

Introducing the student to the various organs the body, the impact of injuries and diseases them from an anatomical and physiological perspective, and the consequences (complications) resulting from them. Also teaching the student the symptoms and signs these conditions and the basic frameworks for how to deal with them. Introducing the stude to cases that require surgical intervention and explaining the nature of this intervention (what they may encounter while working in operation and intensive care), with a focus on emergence cases. At this stage, the digestive, urinary, respiratory and vascular (heart) systems are studied

9. Teaching and Learning Strategies

32. Course Objectives

Course Objectives

Introducing the student to the different body organs and the effects of injuries and disease on them from an anatomical and physiologica perspective, as well as the resulting complications. The student is also taught the symptoms and signs of these conditions and basic frameworks for how to deal with them. I student is introduced to the cases that require intervention and the nature of such interventio (as they may encounter during their work in the operating rooms and intensive care units), with focus on emergency cases. At this stage, emergency medicine and war medicine are studied in detail, along with the completion of the study of the remaining body systems (whi

was started in the third stage). The student is introduced to the most serious and life—threatening conditions that they may face duri their hospital work, along with how to manage them.

33. Teaching and Learning Strategies

8. Course Objectives

Course Objectives

General Objective:

The aim of teaching the subject is to provide student with knowledge of the basics of the equipment used in intensive care units, their use, and maintenance.

Specific Objective:

By the end of the year, the student should be able to:

- 1. Handle all advanced monitoring and patient care equipment used in intensive care units.
- 2. Operate and maintain the equipment in intensive care units.
- 3. Recognize some medical conditions in intensive care.

	4. Intervene in some emergency and critical cases within the intensive care unit.
Teaching and Learning Strategies	

Strategy Adopting the method of delivering lectures and linking each topic with examples from a real work situation.

8. Course Objectives

Course Objectives

Introducing the student to the different body organs and the effects of injuries and disease on them from an anatomical and physiological perspective, as well as the resulting complications. Also, teaching the student the symptoms and signs of these conditions and basic frameworks for how to deal with them. Introducing the student to the cases that regu intervention and clarifying the nature of such intervention (as they may encounter during th work in the operating rooms and intensive car units), with a focus on emergency cases. At t stage, emergency medicine and war medicine are studied in detail, along with the continuati of the study of the remaining body systems (which was started in the third stage).

Introducing the student to the most serious ar
life-threatening conditions that they may face
during their work in the hospital and how to
manage them.

Strategy

Adopting the method of delivering lectures and linking each topic with examples from a real work situation.

8. Course Objectives

Course Objectives

General Objective:

To introduce the student to immediate medica aid and support for patients and the injured to avoid any potential consequences to their life and health.

Specific Objectives:

By the end of the academic year, the student should be able to:

- 1. Perform initial diagnosis, early intervention and resuscitation.
- 2. Identify common cases requiring emergenc medicine intervention.
- 3. Use some modern devices, technologies, a widely used drugs in emergency medicine practice.

Strategy

Adopting the method of delivering lectures and linking each topic with examples from a real work situation.
